LIFE ON PLUTO!

A NEW STAR

Recently, a star was born next to Pluto. Because of it, the temperature is perfect to host life.

The ice will melt and turn into water.

The NASA said that in six months, bacterias will appear and grow. In three years, the planet will be livable.

EXPLORE

The **NASA** is trying to build a huge spaceship to visit Pluto one day. A specialist said " I think we need 8 years to finalize this project. However, it will cost around 11 billion dollars".

HOW ?

How can the NASA find so much money ? Thanks to **Elon Musk**, this project will be possible. It will start in may 2023.
