

## SUBJECT 6

Please, do not write on the exam paper

### Exercise 1

A garden measuring 12 meters by 16 meters is to have a pedestrian pathway installed all around it, increasing the total area to 285 square meters.

We want to find the width  $x$  meters of the pathway.

1) Express the new area in terms of  $x$ .

Check that the area ( in square meters) is given by :  $4x^2 + 56x + 192$

2) Find the width of the pathway by solving a quadratic equation.

### Exercise 2

You run a canoe-rental business on a small river in Ohio.

You currently charge \$12 per canoe and average 36 rentals a day.

An industry journal says that, for every fifty-cent decrease in rental price, the average business can expect to get two extra rentals a day.

We denote by  $x$  the number of fifty cent decrease.

1) Show that the revenue function (in \$) can be written as  $-x^2 + 6x + 432$ .

2) What should you charge to maximize your revenue?
